

TRICKY ROADS HILL START AT CIVIC HILL

Pulling away on a hill can be daunting but the important thing is to take your time! Raise the clutch until the front of the car lifts slightly. Keep the clutch pedal STILL and then (after your mirror checks) simply release the brake. Don't raise the clutch until the car moves, and even then, only raise the clutch 1mm at a time. Add some gas to give the car extra power. Don't hold the biting point too early or for too long or you will damage the clutch.
